

AquaBlok® HoleBlok™

HoleBlok Products Seal & Aid in Pollution Prevention.

HoleBlok+™

The use of reactive **HoleBlok+** helps prevent cross-contamination and rebound in a monitoring well during site investigation, detection and/or remedial action performance monitoring.

HoleBlok+™

Only annular seal that aids in prevention of well contamination.

- Reactive matrix minimizes rebound of contaminants
- Easy application and fast settling reduces field time
- Uniform distribution minimizes bridging
- Effective contiguous and reactive well seal
- Improved remedial performance
- Competitive pricing vs. standard coated pellets

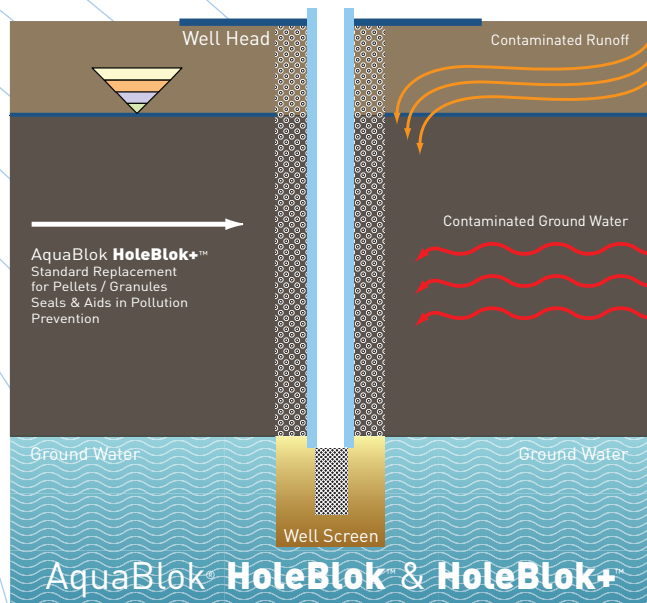

HoleBlok™

Better than pellets at a lower price.

- Easy application and fast settling reduces field time
- Contains inert (food grade) raw materials—no potential contaminants
- Available in standard 3/8" or 1/4" sizes
- Aggregate core provides positive seal
- Forms self-compacting seal at bottom of annular area

Well sealed with HoleBlok+

HoleBlok™ and HoleBlok+™ particles are easy to handle and place. Available in 50 lb. or bulk quantities. No mixing or special equipment is required.
